

Clear Creek Communications

Open Internet Policy

Clear Creek Communications (“the Company”) has adopted the following Open Internet Policy for its broadband Internet access services.

These practices, characteristics, terms and conditions are intended to help preserve the Internet as an open framework that enables consumer choice, freedom of expression, end-user control, competition, and freedom to innovate without permission, while permitting the Company to manage its network reasonably.

The Company may add, delete, or modify certain practices, performance characteristics, terms and conditions from time to time at its discretion. It will provide written notice of these changes on this website, but will not notify customers, content providers, applications providers, service providers or device providers individually of such changes by bill inserts, e-mails, tweets, telephone calls or other direct communications unless specifically required to do so by federal or state authorities. The Company will provide as much advance notice as practicable of such changes. It will normally endeavor to furnish written notice on this website thirty (30) days before changes become effective, but reserves the right to use a shorter notice period when regulatory, operational, technical or other circumstances warrant.

I. Basic Policies

The Company does not:

- Discriminate among specific uses, or class of uses, of its network.
- Impair, degrade or delay VoIP applications or services that compete with its voice services or those of its affiliates.
- Impair, degrade, delay or otherwise inhibit access by customers to lawful content, applications, services or non-harmful devices.
- Impair free expression by actions such as slowing traffic from particular web sites or blogs.
- Demand pay-for-priority or similar arrangements that directly or indirectly favor some traffic over other traffic.
- Prioritize its own application, services or devices or those of its affiliates.

- Discriminate among Internet providers or edge-service providers. However, in order to make voice service available over cable modem or other broadband services, voice traffic is favored over Internet traffic.

No Blocking: The Company does not block lawful content, applications, services, or non-harmful devices, subject to reasonable network management as defined below and as set out in its Terms and Conditions of Use, see below. Network management practices are set forth below.

Use of Network: In no case will the Company discriminate among customers on the basis of the type of content, applications, services or devices which the customer uses.

II. Network Management Practices

The Company manages its network with the goal of providing an enjoyable and useful broadband Internet experience to all of its customers. Within the scope of its resources, it attempts to deploy and maintain adequate capacity and facilities within its own network, and to provide sufficient Middle Mile capacity or facilities outside its service area to connect with the Internet. The Company and its staff works to monitor, address and minimize (but do not guarantee that they can prevent) the effects of spam, viruses, security attacks, network congestion, and other phenomena that can degrade the service of affected customers.

Congestion is an Internet access service problem that can slow web browsing, downloading, and other activities of the customers during certain peak usage periods. Congestion may be caused by capacity limits and bottlenecks in a service provider's own network, or by limitations in the capacity of the Middle Mile transport facilities and services that many rural service providers must purchase from unrelated entities to carry the traffic of their customers between their service areas and the closest Internet nodes.

If significant congestion problems arise in the future, the Company's most desired approach is to determine the source of the problem, and to increase the capacity of the affected portions of its network and/or of its Middle Mile routes where warranted. However, network and Middle Mile upgrades often cannot be accomplished instantaneously because they require negotiations, authorizations and agreements with multiple unrelated entities such as lenders, government agencies, equipment vendors, property owners and other carriers.

If or when network and/or Middle Mile upgrades are not able to be deployed on a timely or reasonable basis, the Company reserves the right to monitor and identify which customer accounts are using the greatest amount of bandwidth during periods of heavy congestion, and to contact those "high-volume customers" to work out a solution to the problem. The Company's preferred solution will be to help such "high-volume customers" find acceptable times during non-peak periods to engage in the same activities.

If that preferred solution is not possible, the Company reserves the right to manage temporarily the Internet traffic of "high-volume customers" during periods of significant congestion until

such periods of congestion pass. This temporary traffic management will be accomplished by technically and commercially feasible methods that are available or that become available in the future. Affected “high-volume customers” will still be able to access the Internet and engage in most online activities they desire. However, during periods of congestion they may experience conditions such as longer times to download or upload files, slower Web surfing, and/or slower movements during online game playing.

Customers should note that any temporary traffic management practices employed by the Company will impact only identified and notified “high-volume customers” during periods when congestion problems are experienced, and will not be based upon the types of content, applications, services, or devices such customers use. On the basis of its knowledge and experience, the Company expects that periods of temporary traffic management, if any, will be brief and infrequent.

III. Applications and Devices

A. Applications

The Company does not favor or inhibit certain applications or classes of applications. Customers may use any lawful and commercially available application which they desire on the Company’s network.

The Company does not normally monitor the contents of the traffic or applications of its customers. It undertakes no obligation to monitor or investigate the lawfulness of the applications used by its customers. If any party contacts the Company with a substantial allegation that an application being used by a customer is unlawful, the Company will investigate the matter (including consultation, as it deems appropriate, with attorneys, consultants, federal or state regulators, and/or federal, state or local law enforcement agencies), and will take appropriate actions to deal with the use of applications that are demonstrated to be unlawful.

Customers may occasionally develop their own applications, or modify commercially available applications. The Company will not prohibit the use of customer-developed or modified applications unless there is a reasonable belief that such applications will cause harm to its network.

The Company does not block or rate-control specific protocols or protocol ports.

The Company does not modify protocol fields in ways that are not prescribed by the applicable protocol standards.

B. Device Attachment Rules

The Company does not have any approval procedures that must be satisfied before a device can be connected to its network. Customers may use any lawful, compatible, type-accepted (if

necessary) and commercially available device which they desire on the Company's network, as long as such device does not harm the network.

The Company does not normally monitor the devices used by its customers. It warns customers that some types of devices (for example, Data Over Cable Service Interface Specification ('DOCSIS') devices intended for use on cable broadband networks) may not be compatible with its fiber optic and digital subscriber line ("DSL") network.

The Company undertakes no obligation to monitor or investigate the lawfulness of the devices used by its customers. If any party contacts the Company with a substantial allegation that a device being used by a customer is unlawful, the Company will investigate the matter (including consultation, as it deems appropriate, with attorneys, consultants, federal or state regulators, and/or federal, state or local law enforcement agencies), and will take appropriate actions to deal with the use of a device that is demonstrated to be unlawful.

Customers may occasionally develop their own devices, or modify commercially available devices. The Company will not prohibit the use of lawful customer-developed or modified devices unless there is a reasonable belief that such devices will cause harm to its network.

IV. Security

The Company does not normally monitor the traffic of its customers. It undertakes no obligation to monitor or protect such customer traffic from spam, viruses, denial-of-service attacks, or other malicious, unlawful or unwanted activities.

The Company recognizes that customers can purchase spam filtering, ransomware and anti-virus software from commercial vendors to meet their needs. The Company may from time to time offer anti-spam and/or anti-virus software or services to customers who desire to purchase them from the Company. When offered, these software or services will be described and priced in other sections of this website and in the Company's sales and marketing materials. Customers are free to obtain anti-spam, ransomware and/or anti-virus software or services from any source they desire, as long as such software or services do not disrupt or degrade the traffic of other customers of the Company or harm the network.

A customer that is subjected to a denial-of-service attack, or similar malicious, unlawful or unwanted activity, is urged to notify the Company as soon as possible. The Company may work with the customer, other service providers, federal and state regulators, and/or law enforcement to determine the source of such activity, and to take appropriate, and technically and economically reasonable efforts to address the matter.

The Company employs commercially appropriate security procedures to protect its network and its customer records from unauthorized access by third parties. The Company does not guarantee that it can protect customers from any and/or all security breaches.

V. Performance Characteristics

Many of the service and performance characteristics of the Company's broadband Internet access services are contained in the service offering portions of this website. See, ccmtc.com/internet_broadband.cfm. The Company offers different tiers of service at different prices, and changes these from time to time.

A. General Service Description

The Company uses a hybrid fiber optic and copper digital subscriber line ("DSL") network that reaches the majority of the potential customers in its rural service area, and a hybrid fiber coaxial cable network that reaches almost all of such customers. The expected access speeds in the DSL portions of the network range from 5 megabits per second ("Mbps") to 10 Mbps download speed and 1 Mbps to 5 Mbps upload speed, depending upon the actual lengths of the respective fiber trunks and copper lines. The expected access speeds in the hybrid fiber coaxial cable portion of the network range from 3 Mbps to 100 Mbps download speed and 1 Mbps to 5 Mbps upload speed, depending upon the electronics installed.

Actual access speeds and time delays (latency) are impacted by the length, capacity and congestion of Middle Mile transport facilities (between the Company's service area and Internet nodes) as well as the characteristic of the Company's own network. Because conditions on these facilities and routes can change frequently, the Company can provide estimated actual access speed and latency information only for specific recent time periods requested by a customer.

The Company's service is suitable for real-time applications, except during times of heavy congestion.

Unless needed for network management reasons, the Company does not impose data caps.

B. Impact of Specialized Services

The Company offers facilities-based VoIP services over its hybrid fiber/coaxial cable facilities to end-users in portions of their territory.

As of the date of this Policy, this specialized service has not adversely affected the last-mile capacity available for the Company's broadband Internet access services, or the performance of such services. Customer should note that significantly heavier use of specialized services (particularly IP video services) may impact the available capacity for and/or the performance of its broadband Internet access services. The Company will monitor this situation, and appreciates feedback from its customers.

C. Impact of Middle Mile Capacity Constraints

The Company must purchase Middle Mile capacity and/or services from other entities for routes approximately 7.6 miles long between the Company's service area and the closest Internet nodes.

The Company has a minority ownership interest in one of its Middle Mile providers, but does not control it. The Company cannot guarantee that it will be able to obtain additional Middle Mile capacity at commercially reasonable prices if and when needs for additional Middle Mile capacity arise.

VI. Commercial Terms and Conditions

The commercial terms and conditions of the Company's broadband Internet access services are contained in greater detail at <http://www.ccmtc.com/internet.cfm>. Click on "Click here to choose the Internet Plan to meet your needs." Then click on Cable Modem Internet Service Policies or DSL Internet Service Policies depending on the service the customer wants to review.

This section provides a brief overview or reference to terms and conditions detailed elsewhere, plus discussions of other terms and conditions required by the FCC's Open Internet Framework.

A. Pricing Terms and Conditions

The Company offers different tiers and levels of service at different prices, and changes these from time to time. These service tiers and prices are detailed in the service offering portion of this website. See, http://ccmtc.com/internet_broadband.cfm

The Company does not impose usage-based fees upon certain tiers or levels of its service.

The Company does not impose fees for early termination with respect to certain of its service arrangements.

In addition, the Company is willing to consider and negotiate prices for customized additional network services requested by specific customers or edge service providers if such services can be designed, developed and furnished in a commercially reasonable manner. If and when such customized services are developed and furnished, the Company reserves the right to adapt and provide them to other customers on a non-discriminatory basis so long as such subsequent provision does not entail disclosure of proprietary or confidential information of the initial customer.

B. No Unreasonable Discrimination

The Company does not unreasonably discriminate in its transmission of traffic over the broadband Internet access services of its customers. It endeavors to give its customers as much choice and control as practicable among its different service offerings and among the content, application, service and device offerings of edge service providers. When reasonable network management practices entail differential treatment of traffic, the Company does not discriminate among specific uses, or classes of uses, of its network.

VII. Privacy Policies

As indicated above, the Company's network management practices do not generally entail inspection of network traffic.

The Company retains and stores certain traffic information (such as the identity of the customer using a particular IP address during a specific period) for time periods required by federal or state law.

The Company retains, stores and provides to law enforcement any traffic information requested pursuant to the procedures of the Communications Assistance for Law Enforcement Act ("CALEA"), the Foreign Intelligence Surveillance Act ("FISA") or other applicable national or state security or criminal statutes.

The Company does not collect, store or use traffic information to profile its customers in order to sell additional services to them, or for similar non-network management purposes.

VIII. Redress Options

Questions and complaints regarding the foregoing matters should be addressed to the Company's Information Technology Officer at (503) 631-2101 or info@clearcreek.coop.

The Company strongly desires to resolve questions, complaints and other problems of its customers and edge service providers in an informal and direct manner that satisfies all interested parties to the greatest extent practicable.

Customers and edge service providers that are not able to obtain satisfaction from the Company have the option of invoking the FCC's informal and formal complaint procedures regarding Open Internet Framework disputes. A customer always has the right to file a complaint with the Federal Communications Commission at www.fcc.gov. If you feel you are a victim of identity theft, you should contact the Oregon Department of Justice at www.doj.state.or.us/consumer-protection/contact-us/ and/or the Federal Trade Commission at IdentityTheft.gov.
